

DESCRIPTION

These two islands and surrounding waters out to one mile offshore are part of the Channel Islands National Park. The islands are entirely surrounded by the 'Santa Barbara and Anacapa Islands' Area of Special Biological Significance (ASBS), which lies within the Channel Islands National Marine Sanctuary.

The remote Santa Barbara Island, in Santa Barbara County, has only two facilities: a National Park Service Ranger Station and a landing station. Near the Ranger Station are a leachfield and three portable toilets, but it is doubtful that the leachfield contributes any significant discharge. There are no roads and only a few small foot trails. Primary activities on the island take place offshore. The Santa Barbara Island State Marine Reserve encompasses the state waters of the southeast quadrant off this island.

Anacapa Island in Ventura County is the smallest of the Channel Islands, and consists of three small islets. There are a few structures on the island, including a museum, visitor center, and a lighthouse. Activities on the island include hiking and camping. The boat landing facility for Anacapa Island is a potential nonpoint source discharge. The Anacapa Island State Marine Reserve and State Marine Conservation Area encompass most of the state waters off the north side of this island.

REASON FOR CCA IDENTIFICATION

The watersheds on these two islands flow into the 'Santa Barbara and Anacapa Islands' **Area of Special Biological Significance** (ASBS), which is a State Water Quality Protection Area. This ASBS lies within the Channel Islands National Marine Sanctuary.

POLLUTED RUNOFF CONDITIONS

	Top 5 Runoff Pollutants of Concern ¹					Efforts to Address Pollutants (See next page)
